

Cloud Native Health Check

Optimizing application and platform transformations while ensuring continuous availability of your mission critical apps

If You Are Moving From:

- Java Enterprise to Cloud Native
- VM Infrastructure to Serverless
- NFV to CNF
- Mesos to Kubernetes
- Monolithic to Microservices

You May Face These Challenges:

- State design in a dynamic environment
- A dramatic increase in services to manage
- Structural misalignment between applications and platforms
- A growing need to operationalize services
- Software supply chain security challenges and new threat vectors

Your Solution Is a Cloud Native Health Check:

Define efficient migration strategies from legacy architectures

Avoid state inconsistencies due to incorrect designs or tool usage

Eliminate scaling issues and performance problems

Select best fit tools for teams, platforms, pipelines and storage

Identify and correct cloud native anti-patterns

Adhere to platform and supply chain security best practices

Reduce complexity and increase release velocity

Professional Services

Put our industry-leading cloud native team to work for you.

If you are moving from:

- Java Enterprise -> Cloud Native
- VM Infrastructure -> Serverless
- NFV -> CNF
- Mesos -> Kubernetes
- Monolithic -> Microservices

You may face challenges:

- State design in a dynamic environment
